

ZG-113 Mounting Bracket

Instruction Sheet

For use with TF Series actuators when the actuator cannot be mounted directly to the damper shaft. The ZG-113 is provided with hole patterns to mount the TF series actuators in either a horizontal or vertical position to meet space requirements.

The ZG-113 Mounting Bracket is designed to mount the TF series actuator in the same mounting locations as common foot mounted, crankarm style actuators. Hole patterns in the base match common Honeywell™, Siebe™ (Barber Coleman™), and Johnson Controls™ actuators for easy retrofit.

Note: ZG-TF112 crankarm kit includes the ZG-113 bracket, crankarm and mounting hardware.
